

SAIKIRAN PASUNUTI

FULL STACK DEVELOPER | BACKEND & AI APPLICATION ENGINEERING

Bengaluru, India | kiranpasunuti671@gmail.com | +91 9849245953

github.com/kiranpasunuti

PROFESSIONAL SUMMARY

Full Stack Developer with experience in Java, Spring Boot, Angular, Python, FastAPI, SQL, and AI application engineering. Builds REST APIs, search engines, and business automation. Developed Large Language Model (LLM) workflows using Retrieval-Augmented Generation (RAG), Qdrant, model routing, catalogue validation, and tool calling for automotive parts applications.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript

Backend & frontend: Spring Boot, FastAPI, REST APIs, Hibernate/JPA, Angular, Angular Material, Reactive Forms, HTML, CSS

AI & retrieval: Gemini API, Groq, Ollama (Qwen/Mistral), RAG, Qdrant, sentence-transformers, hybrid search, prompt engineering, structured extraction, tool calling, MCP integration concepts

Data & integrations: MySQL, Elasticsearch, Redis/disk caching, AWS S3, Google Places API, Google Distance Matrix API, Infinto (Surbo Chat)

PROFESSIONAL EXPERIENCE

Full Stack Developer | Autoverse Mobility Private Limited

Bengaluru | May 2025 - Present

- Developed Spring Boot REST APIs and Hibernate/JPA persistence for spare-parts management, quotations, logistics, and operational workflows; optimized SQL queries and reusable service logic.
- Built Angular modules and reusable UI components with TypeScript, Reactive Forms, Angular Material, and backend API integrations.
- Implemented Elasticsearch search with normalization, fuzzy matching, OEM-to-OES mapping, brand filtering, warehouse-stock enrichment, relevance tuning, and deduplication.
- Built AI invoice extraction and purchase-order comparison workflows with Gemini, plus Python-based WhatsApp automation for search, bookings, quotations, tracking, and support.
- Integrated distance APIs, database caching, and vehicle-category-based shipping calculations; developed LLM, RAG, and tool/API orchestration workflows for business applications.

PROJECTS

Advanced Text-Based Search & Quotation Engine

Java / Spring Boot / Elasticsearch

- Built spare-parts search for inconsistent, abbreviated, and misspelled inputs using normalization and fuzzy matching.
- Integrated OEM-to-OES mapping, brand filters, inventory, pricing, relevance, and deduplication with quotation generation and WhatsApp delivery.

EDUCATION

Bachelor of Technology | CMR Institute of Technology, Hyderabad

2023 | CGPA: 9.0

SAKIRAN PASUNUTI

PROJECTS - CONTINUED

Autoverse AI | LLM Workflow & Automotive Parts Platform

Python / FastAPI / Qdrant / Gemini / Groq / Ollama / MySQL / Server-Sent Events

- Built a FastAPI natural-language workflow for vehicle resolution, workshop vocabulary normalization, fuzzy part matching, and variant-scoped catalogue lookup.
- Implemented Qdrant dense and BM25-style sparse retrieval with reciprocal rank fusion, compatibility-aware ranking, deduplication, and evidence-based confidence scoring.
- Developed a bounded agentic resolver with catalogue-candidate validation, retry feedback, and clarification fallback; added configurable Gemini, Groq, and Ollama model routing.
- Added Server-Sent Events (SSE), persistent conversation/vehicle context, and tool calling for catalogue, stock, brand, and kit queries.
- Connected document ingestion/OCR, PDF quotations, and dispatch endpoints; implemented role-based access control (RBAC) and organization-aware catalogue/cache handling.
- Built extraction-provider comparisons for latency and agreement with a Gemini baseline, plus regression coverage for parsing, session state, and organization scoping.

AI-Based Invoice Processing System

Spring Boot / Gemini API / SQL

- Extracted structured fields from PDF invoices using prompt engineering and validation, then compared invoice data with purchase orders to identify discrepancies.
- Connected the extraction and comparison results to database persistence and notification workflows.

WhatsApp Automation Bot

Python / Infinto (Surbo Chat) / Spring Boot APIs

- Developed and deployed a bot for spare-part search, service booking, quotations, order tracking, and support.
- Converted conversational requests into structured backend API calls and controlled responses for live customer and operational communication.

Intelligent Spare Parts Suggestion Engine

Spring Boot / Elasticsearch

- Built inventory discovery using fuzzy matching, normalized part names, OEM-to-OES mapping, brand filters, warehouse-stock enrichment, result ranking, and deduplication.

Distance & Shipping Optimization Engine

Spring Boot / Google Distance Matrix API / Database caching

- Calculated garage-to-vendor distance and travel time, cached responses to avoid repeated API calls, and computed shipping charges using distance and vehicle category.

E-Commerce Web Application

Angular / TypeScript / Reactive Forms / REST APIs

- Built responsive product listing and filtering, cart management, and checkout workflows with reusable components, state handling, backend integration, and UI rendering optimization.
